

WILDING BUTLER

Building with Care

Environmental policy statement

Wilding Butler Construction Ltd takes pride in the high quality of all its activities. The company operates throughout Hampshire and the surrounding areas.

Wilding Butler is aware of the potential environmental impacts from its activities. Therefore, through the development and implementation of an environmental management system, the company aims to continually improve its environmental performance. We are committed to preventing pollution and will ensure compliance with all relevant legislation and any other requirements that apply.

Five key objectives form the focus of our environmental policy, which highlight the most significant opportunities to improve Wilding Butler's environmental performance.

- Ensure all operations are conducted within the legislative and other requirements.
- Manage waste in the appropriate manner and minimise where possible.
- Ensure appropriate management of all hazardous materials considering the whole life cycle.
- Minimise energy consumption where possible in all areas of the business.
- Ensure that all emergency preparedness procedures are implemented correctly in order to minimise potential environmental impacts.

Progress towards these objectives will be regularly monitored, the results of which will be reported on an annual basis. The policy will be updated to incorporate changes in the activities of Wilding Butler and new developments in legislation and the best available technology. The policy will then be reviewed annually and during times of significant change.

Wilding Butler will communicate, implement and maintain its environmental policy throughout the organisation and those working on its behalf. Staff awareness and competency will be ensured through a systematic training programme in line with defined roles and responsibilities.

The environmental policy will be published electronically, and hard copies will be readily available at Wilding Butler sites on request to any interested parties.
